

PHOTONICS ASSEMBLY

Large scale assembly and packaging foundry for photonic ICs

PHIX Photonics Assembly

CARLA CAMP CAREER DAY
2024

Contents

Who am I?

- Background
- My role at PHIX

What does PHIX do?

- A production company...
- ...with massive dependence on engineers!

What is it like to work at PHIX?

- Meet one of my colleagues in engineering
- Company culture

Who am I?

Introduction: Gijs van Ouwerkerk

- Country of origin:
The Netherlands
- Background:
PhD in Mechanical Engineering
(University of Twente, 2009)

Professional photographer
(freelance, 2008-present)
- Role:
Marketing Manager

Introduction: Gijs van Ouwkerkerk

Making PHIX visible

- Organizing participation in exhibitions
- Website content and development
- Social media posts
- Photography and videography
- Technical documentation
- Company flyers, banners, promotional goodies
- Education and talent acquisition
- ...and much more

What does PHIX do?

A PIC by itself is not a product!

It needs:

- Optical interconnection (fibers / free-space / other chips)
- Electrical interconnection (wire bonds / electronic ICs)
- Thermal management (active / passive)
- Mechanical support (robustness / sealing)

Photonics Packaging (What we do)

Example: automated edge coupling

Who we are

PHIX is a world leading foundry for packaging and assembly of components and modules based on photonic chips, in scalable production volumes.

- Spun off from LioniX, but now independent and serving customers big and small worldwide
- One of the fastest growing production companies in The Netherlands
- 55 people, with 18 nationalities

Where we're located

New 1800 m² building in Enschede

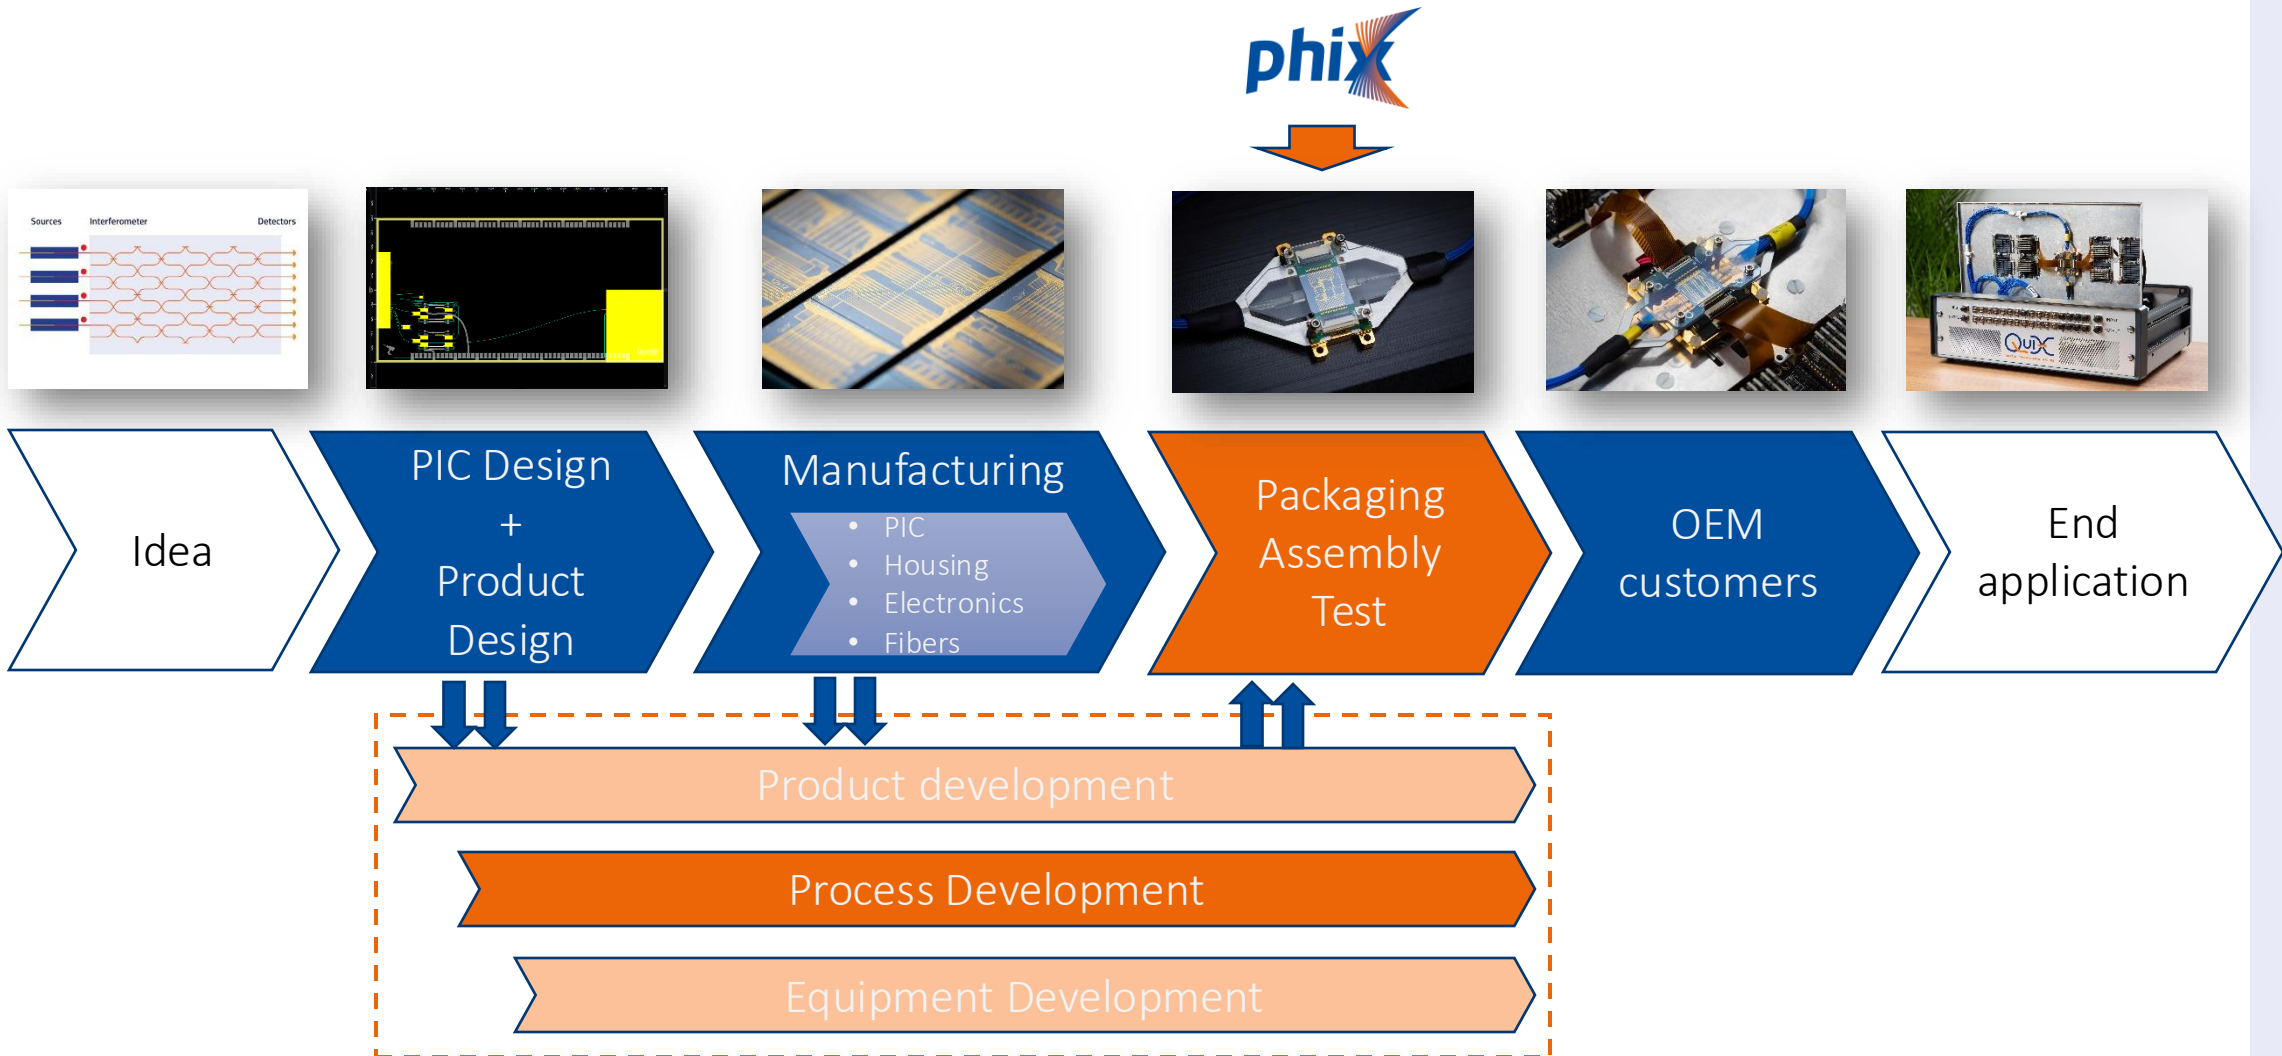

- 600 m² cleanroom production facilities, up to ISO 5 specification
- Spacious offices, with room for cooperation and quietness
- Great coffee!

Where we're located

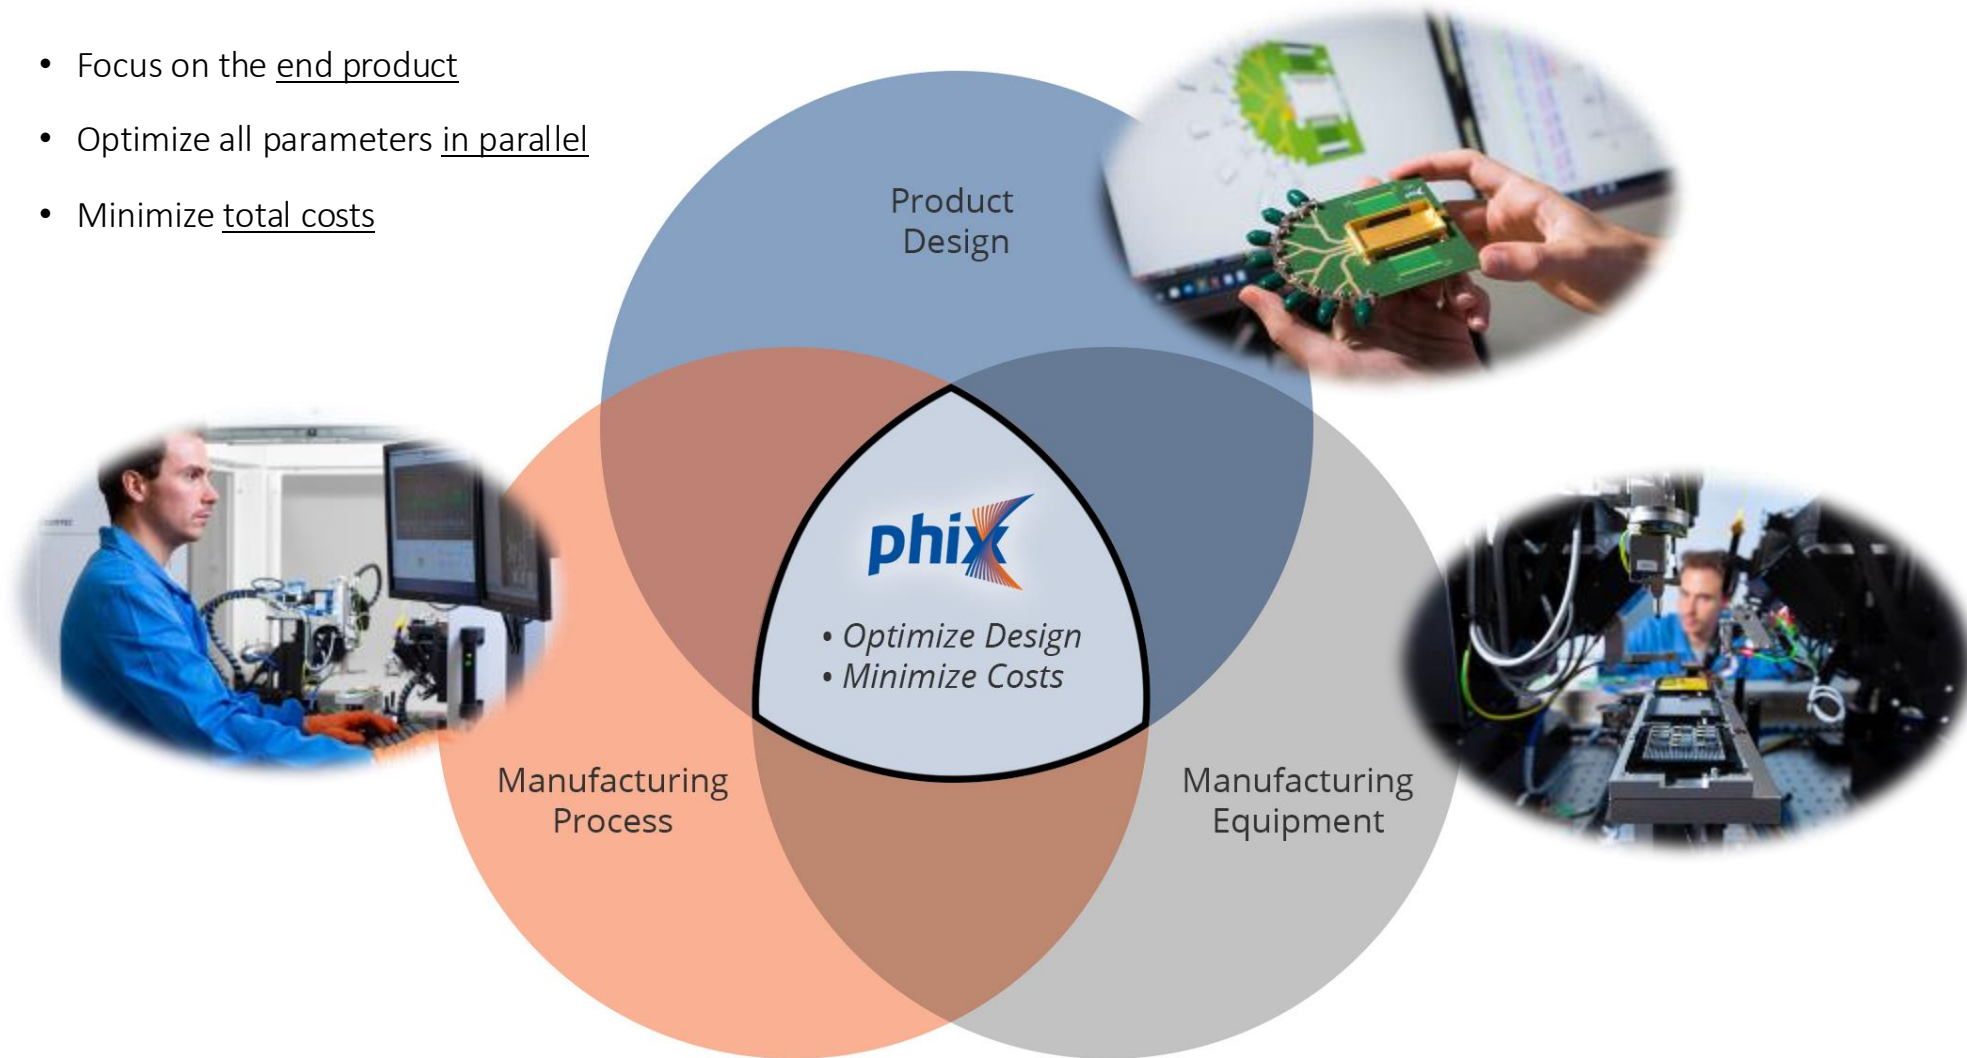

Our position in the value chain

PHIX Approach to Packaging & Scale-up

- Focus on the end product
- Optimize all parameters in parallel
- Minimize total costs

Three types of customers

Prototype packages

- Chip characterization and device demonstrators
- 1-100 units

Volume packages

- Optimized for manufacturability, cost, and reliability
- 100+ units

Contract manufacturing

- Providing outsourced or second-sourced component production

Applications of PICs packaged by PHIX

- Self-driving vehicles (LiDAR and IMU units)
- Photonic quantum computing
- Point-of-care medical devices
- Next generation optical transceivers
- Measurement and sensing (metrology)

Research projects

Working with (inter)national partners to innovate

- Projects of 1-4 years
- Involving (inter)national companies, research institutes and universities
- Strengthening the industry by forging new partnerships

Tackle the packaging challenges of tomorrow

For example:

- Build a drone-mounted wireless photonic transceiver
- Package a wafer-sized photonic chip with 3000+ electrical connections

What is it like to work at PHIX?

PHOTONICS ASSEMBLY

Meet my colleague: Anne Leenstra

- Country of origin:
The Netherlands
- Background:
MSc in Nanotechnology and BSc in
Advanced Technology (University of
Twente)
- Role:
Process automation engineer

Meet my colleague: Anne Leenstra

Anne's job

- Developing and optimizing automated assembly processes
- Purchasing, installing and modifying equipment
- Process improvement in terms of precision, speed, and reliability
- Training operators

Meet my colleague: Anne Leenstra

Example: wafer level chip bonding

Meet my colleague: Anne Leenstra

Solder reflow by laser heating

- Laser heating module developed and installed in collaboration with machine manufacturer Finetech
- Local heating enables wafer-level assembly

An inspiring workplace

A great place to work

- Be at the heart of the integrated photonics revolution
- Learn something new every day
- Multidisciplinary collaboration with colleagues from 18 different nationalities
- Combine desk work with hands-on assembly
- Flat hierarchy with much room to take responsibility and develop new skills
- Great team spirit: working together to make a scale-up succeed

Open positions: phix.com/careers
